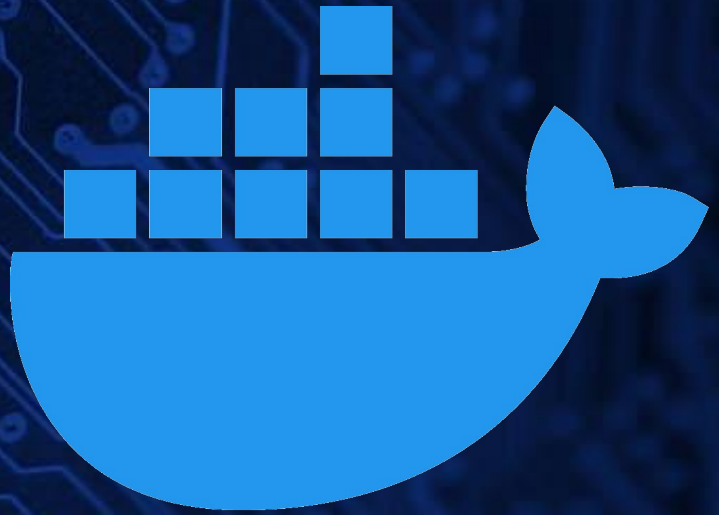
Docker : Docker MasterClass for DevOps

Manage Containers on Host Machine II



Docker : Service Containers

- Learn Docker CLI to manage Docker.

- Docker container names
  docker container run - -publish 80:80 - -detach - -name <Name> <Image_Name>

- See logs of a specific container
  docker container logs <container_name>/<container_id>

- See process running inside the containers
  docker container top <container_id>

Docker : Service Containers

- Learn Docker CLI to manage Docker.

- Remove all unused containers
  docker container rm <space separated container ids>

Thank You...

Don’t be the Same! Be Better!!!
