# Docker : Docker MasterClass for DevOps

Basics of Docker File

# Docker : Service Containers

- Docker can build images automatically by reading the instructions from a **Dockerfile**.
- A Dockerfile is a text document that contains all the commands a user could call on the command line to assemble an **image**.
- A Docker image consists of **read-only layers** each of which represents a Dockerfile instruction.
- Command to build image from Dockerfile:  
***`docker build -f <dockerfile_path>`***

# Thank You...

Don't be the Same! Be Better!!!
