

# Docker : Docker MasterClass for DevOps

Concept of Docker Image  
Layers

# Docker : Service Containers

- Each image consists of a series of layers. Docker makes use of union file systems to combine these layers into a single image.
- Union file systems allow files and directories of separate file systems, known as branches.
- Show Image Layers:  
***docker history <image\_name>***
- History command shows different layers, command used for each layer, and the exact size of each image.

# Thank You...

Don't be the Same! Be Better!!!
