
Docker : Docker MasterClass for DevOps

Execute Commands in Running
Container

Docker : Service Containers

➤ Learn Docker CLI to manage Docker.

➤ Start Container in Interactive Mode

`docker run -it [image_name or image_id] [command]`

- -i: Keep STDIN open even if not attached.
- -t: Allocate a pseudo-TTY (terminal).

Docker : Service Containers

➤ Learn Docker CLI to manage Docker.

➤ Run Commands in Running Containers

`docker exec [options] [container_name or container_id] [command]`

- `[options]`: Additional options you may want to include.
- `[container_name or container_id]`: The name or ID of the running container.
- `[command]`: The command to be executed inside the container.

Thank You...

Don't be the Same! Be Better!!!
