

Docker : Docker MasterClass for DevOps

Assignment : Data Volumes in
Docker Container

Docker : Service Containers

- DataBase Upgrade with Volumes in Containers
- Create mysql container with some specific version with Volume named mysql-db
- After Starting the Container Verify Container Status
- Go to Database and Create Some Data
- Stop and remove the Container
- Start new MySQL Container with existing Volume and Verify the Data.

Thank You...

Don't be the Same! Be Better!!!
