# Docker : Docker MasterClass for DevOps

Docker Image Tagging

# Docker : Service Containers

- What exactly are Docker tags?
  - Docker tags convey useful information about a specific image version/variant.
- Tags added to image during the Building of Image.
- Images can be tagged explicitly with the help of Tag Command.  
***docker tag SOURCE\_IMAGE[:TAG] TARGET\_IMAGE[:TAG]***
- When you don't specify Docker Image tag. By default it takes 'latest' tag.

# Thank You...

Don't be the Same! Be Better!!!
