
Docker : Docker MasterClass for DevOps

Execute Your Application in
Container

Docker : Service Containers

- We will be using Open Source Nginx Web-Server
- Start Nginx web-server in Docker
`docker container run - -publish <host_port:container_port>
<image_name>`
- Stop Container foreground process
`ctrl+c`
- Start Container in Background or detach mode
`docker container run - -publish <host_port:container_port>
- -detach <image_name>`

Docker : Service Containers

- List running Containers

`docker container ls`

`docker ps` (Old Way)

Thank You...

Don't be the Same! Be Better!!!
